Credit Overview

Summary

Bankruptcy risk:	0.300%
Current rating (2019):	BBB
Previous rating (2018):	BBB
Industry bankruptcy risk:	0.162%
Industry code:	64.20 Activities of holding companies
Net sales (mDKK):	684.5
Net earnings (mDKK):	832.3

Credit Limit (mDKK): 16.05

Credit Rating Distribution

The credit rating of a company is based on its bankruptcy risk (for more information about how the credit risk of a company is calculated see the appendix). The picture above depicts the distribution of credit ratings. The companies with the lowest risk will achieve AAA-rating whereas the most risky companies will be given the worst rating of 'C'.

The rating is based on the bankruptcy risk in such a way that a certain share of all companies will receive a certain rating. The chart above visualizes how the credit ratings are distributed, so for example the top 1.3% of companies (or companies at or above the 987th permille) will receive a 'AAA' rating and companies whose bankruptcy risk falls between the 500-767 permilles will receive a 'BBB' rating.

The credit score is simply the rank of the company in question with respect to all other companies. The scale of our credit score is 0-100, where 100 is the company that is least likely to go bankrupt and 0 is the company that is most likely to go bankrupt.

Company Overview & Credit History

Credit Analysis

Equity ratio (%)	50.7%	Bankruptcy risk	0.30%
Interest bearing liabilities (mDKK)	253.2	Credit rating	BBB
ROA-%	15.5%	Credit score	46
Net sales growth	15.3%	Industry bankruptcy risk	0.16%

Demo Company financials are in excellent shape. They have been growing steadily for the past three years, with gross profit growing on average 4% each year. Demo Company also have a good equity ratio of 51%, which is an indicator of a low level of indebtedness, and this is a very important factor in bankruptcy risk estimation. On top of this, Demo Company is also making a healthy profit with a ROI of 27% in last year. All in all, Demo Company is a very solid company at the moment, since its growth, indebtedness and profitability are all in great shape.

Credit History

Year	Credit score	Credit rating	Bankruptcy risk
2019	46	BBB	0.300%
2018	42	BBB	0.361%
2017	51	BBB	0.295%
2016	50	BBB	0.318%
2015	49	BBB	0.344%

The credit score refers to a company's risk relative to other companies. The value ranges from 0 to 100, and the higher the score the lower the risk. For example, a credit score of 78 means that the company in question has a lower risk than 78 % of all companies. A credit score is showed in addition to the rating, as some rating classes can cover a wide range of credit scores.

Credit Rating, Score, and Limit

Appendix

Credit rating

Credit rating is a way to classify companies into larger groups, making it easy to quickly compare a given company to all the others in our database. In our system, the credit rating is based on the bankruptcy risk of a company. The companies with higher risks have lower credit ratings and the low-risk companies have high ratings. We use the standard seven rating categories that range from AAA-C where AAA is the category containing companies with the lowest bankruptcy risks and C is the category containing companies with the highest bankruptcy risks. Each rating class contains of a certain fixed share of all companies in the system. The distribution of companies to different rating classes is illustrated in the graph below. It must also be noted that if the company has data for only few historical years, then the estimation of bankruptcy risk will be more imprecise.

Credit score

The credit score refers to a company's risk relative to other companies. The value ranges from 0 to 100, and the higher the score the lower the risk. For example, a credit score of 78 means that the company in question has a lower risk than 78 % of all companies. A credit score is showed in addition to the rating, as some rating classes can cover a wide range of credit scores.

Credit limit

The credit limit provided in the report is an approximation on how much credit should be extended to a company. It is based on the bankruptcy risk of a company, but also its potential to meet the credit obligations. Thus, it also takes the solvency as well as the company's ability to generate cash flows into account.

Credit Risk Distribution

Bankruptcy risk

While bankruptcy risk models based on logistic regression are relatively easy to understand and are good for visualizing the bankruptcy risk, they have the downfall of using constant weights for variables that are included in the model. That is why we have invested countless of hours into the development of state-of-the-art machine-learning models for bankruptcy risk estimation. Compared to regression models, machine learning models are much more versatile and can observe more complex and dynamic relationships between different variables.

Currently we utilize the Gradient boosting model using XGBoost library, which was used to obtain the best results in testing. Other models we studied include neural networks and random forest models. To learn more about our bankruptcy risk assessment methodology visit <https://www.creditreports.dk/credit-risk-assessment-methods/>
